GENBRUG AF RAMPER

Excellent Systems ramper er 100% gulfrie og genanvendelige

Vi laver grønne ramper som er 100% gulfrie og genanvendelige. Vi bruger træ og aluminium som råvarer. Vi genbruger alle vores materialer og producerer nye produkter, uden forurening for dig som kunde.

DIT BIDRAG TIL ET GRØNERE DANMARK

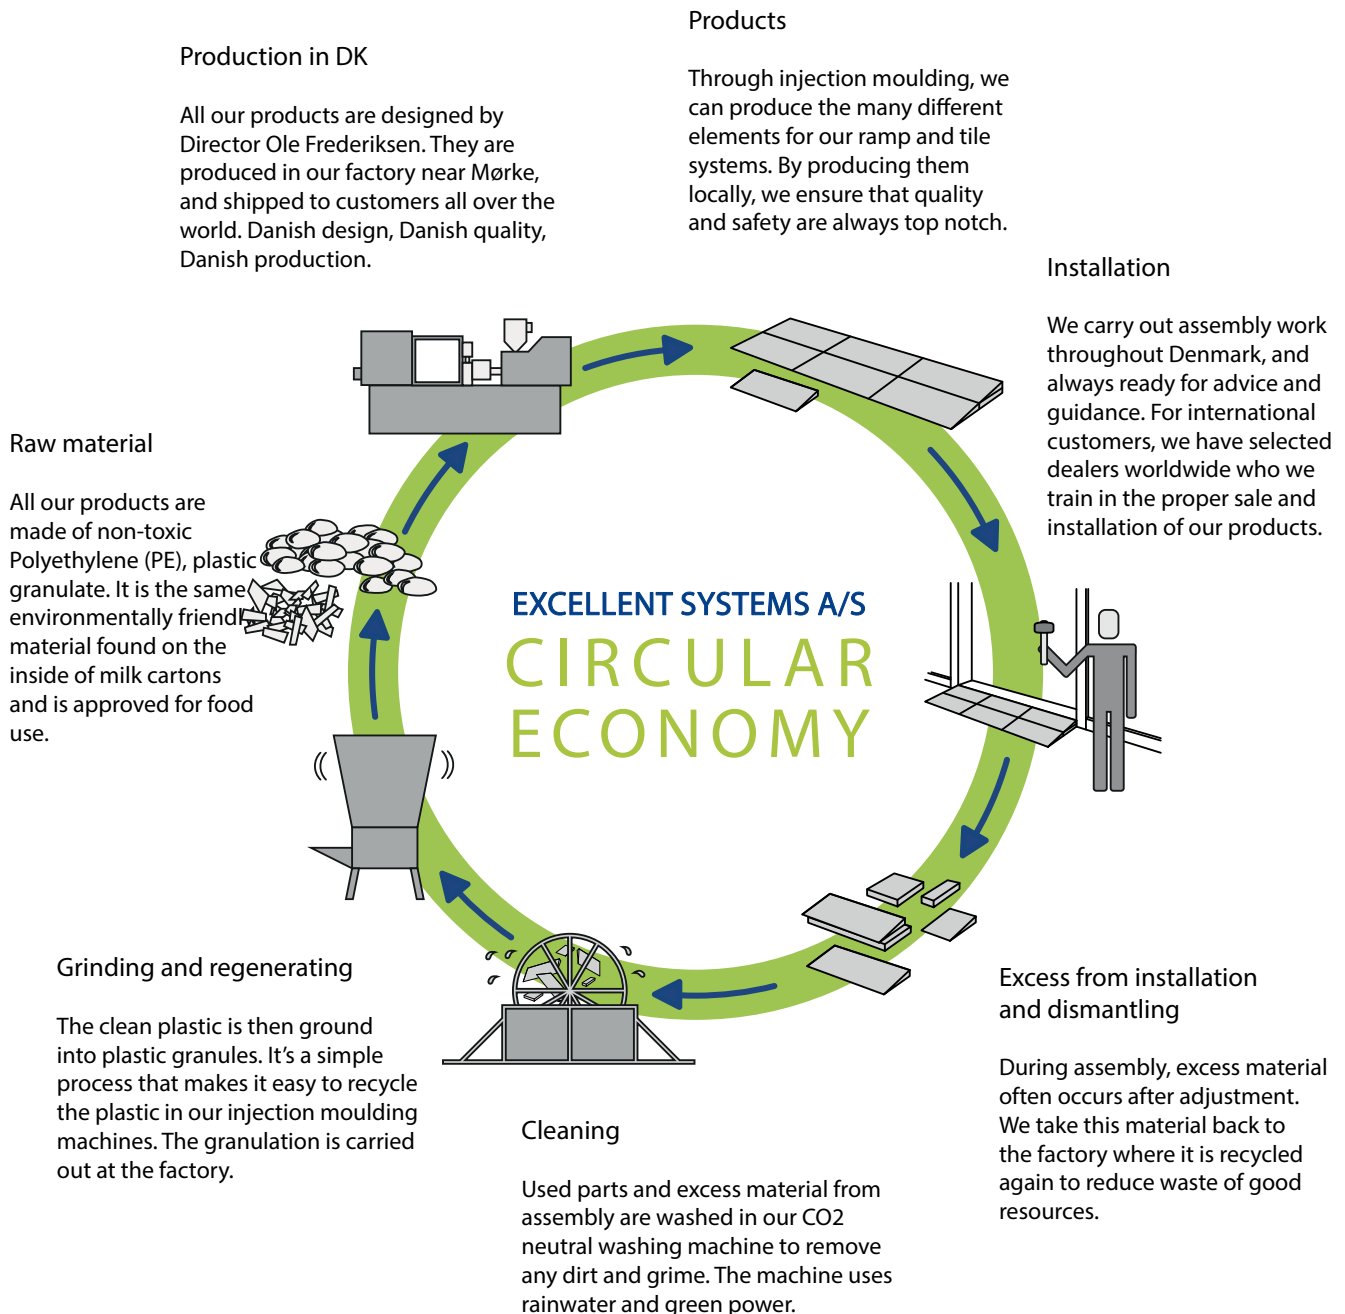

Ved at benytte vores ramper bidrager du til et grønt Danmark. Her er nogle af de måder, du kan gøre det på:

- 1. Brug ramperne i mange år.
- 2. Sørg for at ramperne er i god stand.
- 3. Genbrug ramperne, når du er færdig med dem.
- 4. Sørg for at ramperne er gulfrie og genanvendelige.

SUSTAINABLE DANISH PRODUCTION WITH NON-TOXIC MATERIALS

At Excellent Systems we have always strived to impact our environment as little as possible, through sustainable production and the use of non-toxic materials. Our focus on recycling resources and reducing waste permeates all of Excellent Systems' work and values.

Read more about our sustainable production

HOW IT WORKS

Imagine a world with 100% recycling - no waste, no toxins and minimal CO2-emissions! That is what we strive for here at Excellent Systems. We continually work on changing the way people think about plastic and we can not say this enough - our ramps are most definitely NOT single use and even after they have been used so many times that they are worn out, return them to us for recycling into new ramps.

We use pallet boxes like this for gathering the material for regeneration. - Excess material from installation and dismantling

We have these pallet boxes with many of the local municipalities in both Denmark and Sweden and we even regularly get used products back from Holland.

No matter where we sell our products, we always encourage the end user to either return the products to us after use or recycle them locally.

Circular economy is smart business

There are many benefits to sustainable production, and both resources and money to save. Over the years, we have managed to recycle almost everything from our daily production. We usually say that the only waste we have is what comes from the canteen. Back in 1992, we started using the cooling water from our production machines to heat our offices. In this way we save water, electricity and heat.

The circular economy does not only benefit our company. Our customers also save money by sending end-of-life products for recycling. In fact, we give a cash discount on the next order, based on the number of kilograms of recycled plastic we receive. We call this program Cradle to Cradle.

OUR VISION

Our mission in life is to bring accessibility to as many people all over the world as possible - and doing it in the most sustainable way possible.

Being a part of our circular economy, you will support

- A sustainable production with a minimum amount of waste
- Danish design, produced in Denmark
- 100% nontoxic
- Purchase of used products for regeneration
- and most importantly, the reuse of plastic
